Abstracts

China's production of fluazifop-p-butyl technical is mainly restricted by fluazifop-p-butyl's intermediates (2-Chloro-5-trifluoromethyl pyridin). Currently, the production technology of 2-Chloro-5-trifluoromethyl pyridin are mastered by certain producers. So manufacturers with sufficient raw material supply or having mastered mature production technology will obtain considerable benefit in the market.

Nowadays, the impact of raw material on fluazifop-p-butyl production has become weaker, owing to there are more and more 2-Chloro-5-trifluoromethyl pyridin producers both at home and abroad. And the gap between imported raw material and domestic raw material in terms of price and quality has been narrowed in China.

Meanwhile, fluazifop-p-butyl industry in China is still facing problems such as oversupply, intense competition and technology barrier. Consequently, fluazifop-p-butyl industry in China is facing opportunities and challenges at the same time.
