Abstracts

After years of development, glucose has become one of the major starch sugars in China. However, in the past few years, China's glucose production has been expanding slowly, affected by weak demand and fierce competition. Furthermore, the price of glucose's raw material witnessed an uptrend in the same period. With the weak demand and high raw material costs, competition in China's glucose market is becoming increasingly intense. What has happened in the glucose market? How is the current competition structure of glucose in China? Who are the leading producers? What is the future relationship between supply and demand in the glucose market?

With the application of glucose is quite wide in China due to its long history, what is the current consumption pattern of glucose in China? How will glucose's major downstream industries develop in China? What is the consumption trend?

Besides the aspects mentioned above, what other changes in the glucose industry can be seen in 2012? What is the development trend of the glucose industry in China? You can find the answers in this report.

This report combines CCM's expertise in glucose market research. Highlights of this report are as follows:

Overview of glucose industry

Introduction to the key raw material of glucose (corn starch)

Introduction to the capacity and output

Detailed description on glucose's consumption pattern, market size and application fields

Forecast on future development of the glucose industry in China
