Bio-pesticides are certain types of pesticides derived from such natural materials as animals, plants, bacteria, and certain minerals. For example, canola oil and baking soda have pesticidal applications and are considered bio-pesticides. With people's rising awareness of environmental protection and food safety, more and more attention has been paid to bio-pesticide, which enjoys advantages of no pollution, no residue, and high efficiency. So bio-pesticide has bright market outlook in the future. At the end of 2010, there were approximately more than 2,500 registered bio-pesticide active ingredients and 250 products.

The Survey of Bio-pesticide Industry in China is CCM's first edition report on Chinese bio-pesticide industry, finished in April 2011. This intelligence report attaches importance to the following parts:
