Abstracts

In China, ethylenediamines has been widely used in the production of resin, pesticide, pharmaceuticals, etc. At present, China's ethylenediamines products are still in short supply and the demand increases year by year.

Even if it has started production at the end of 1980's, China's ethylenediamines are still in small-scale industrialized production (capacity \geq 10,000t/a) before 2010. However, in November 2010, Jiangxi Hurricane's 10,000 t/a ethylenediamine project is put into commercial production, which will greatly improve the situation that domestic ethylenediamine demand relies on import heavily.

China's ethylenediamines supply mainly relies on import, and the import volume has been increasing with the growth rate of 13% in recent 10 years. What's the import situation of ethylenediamines in these two years(from 2009 to 2010) and who are the main importers?

The main consumption fields of ethylenediamines in China concentrate in resin, pesticide, pharmaceutical, complexant, polyurethane foam, spandex, plastic, bleach and paint, etc, and the total consumption volume of ethylenediamines has reached about 42,600 tonnes in 2010. What kinds of ethylenediamines are consumed in these main consumption fields; what's the consumption volume and who are the main end users? This report will tell you the volume and the main end users.

The detailed answers of the above focuses will be given in this report, and it will also provide you with an insightful analysis on other aspects as listed below:
