Abstracts

Flame retardants are important for lives safety as it can delay combustion process of inflammable materials for precious escape time. Now many familiar products contains flame retardants such as electrical & electronics, wire & cable, motor vehicles etc. With living standards improving, it is envisioned that China's flame retardants demand will increase greatly.

China currently has become a key player of flame retardants both in production and consumption. It can produce most common flame retardants with output of almost 500,000 tonnes in 2009, and has witnessed domestic consumption above 250,000 tonnes in 2009.

However, unlike developed countries, the domestic production concentrates on common products and lacks upscale products, mainly attributed to the still immature technologies. The domestic consumption is also focused on such traditional products as BFRs and ATO.

Meanwhile, many flame retardants and their downstream products are exported annually, suggesting high dependence on exports of Chinese market. Coupled with domestic expanding capacity and output, various commercial opportunities will be created for this industry in China.

In order to figure out the opportunities:

- CCM focuses on domestic production for different flame retardant types to discover their present situation and future prospects.
- CCM pays great attention to the major products and their producers in China.

- CCM analyzes domestic consumption by application field.
- CCM provides insights into key factors influencing flame retardant development and forecasts future demand and output for each flame retardant type to 2014.

Through the above penetrations in this report, the latest dynamics and development trends of Chinese flame retardant industry will be clearly presented, which is valuable for investors, traders (both exporters and importers), technology providers, overseas competitors, etc.

Contents

EXECUTIVE SUMMARY

METHODOLOGY

1 DEVELOPMENT HISTORY OF FLAME RETARDANTS IN CHINA

2 SITUATION OF FLAME RETARDANTS IN CHINA

2.1 Overview

2.2 Introduction of major flame retardants

2.2.1 Brominated compounds

2.2.2 Chlorinated compounds

2.2.3 Phosphorus compounds

2.2.4 Antimony compounds

2.2.5 Aluminium hydroxide and magnesium hydroxide

2.2.6 Others

3 END-USE MARKET OF FLAME RETARDANTS

3.1 Overview

3.1.1 Market growth

3.1.2 Market analysis by application area

3.2 Introduction to major end-use segments

3.2.1 Plastic

3.2.2 PCB

3.2.3 Rubber

3.2.4 Textile

3.2.5 Coating

3.2.6 Wood and paper

4 POLICIES AND REGULATIONS

4.1 Overview

4.2 Overseas policies and regulations

4.3 Domestic policies and regulations

5 TECHNOLOGY

6 KEY FACTORS AND FORECAST

6.1 Key factors

6.2 Forecast of the flame retardants industry

7 INVESTMENT ENVIRONMENT ANALYSIS

8 CONCLUSIONS

9 APPENDIX

9.1 Profiles of key producers

9.1.1 Shandong Brother Sci. & Tech. Co., Ltd.

...

9.1.21 Zibo Wuwei Industrial Co., Ltd.

9.2 Profiles of key end-users

9.2.1 Guangdong Kingfa Sci. & Tech. Co., Ltd.

...

9.2.5 Beijing ARS Flame Retardant Decoration Materials Co., Ltd.
