China is currently the biggest melamine producer and supplier in the world. The domestic melamine capacity almost tripled during 2006–2016, but how could the operation rate be in a downtrend at the same time? About 20% of the total melamine output was exported every year from China, how did other countries react to China's mass exportation? Melamine is commonly used in laminate, coatings, papermaking, textile, leather, mold plastics, flame retardant additives and water-reducing admixtures in China, which of them had the largest growth in the past five year? Domestic melamine production methods are widely adopted as technology developed, which of them is the most popular methods in China?

Answers to these questions can be found in this intelligent report. The key points of this report are listed as below:

Production, consumption, price, import & export of melamine in China.
Government policies and technology of melamine production in China.

Forecasts on production and consumption of melamine in China.
