Abstracts

Description:

CCM has finished a market report named Future of Enzyme in China to 2020 in Feb 2010. In order to meet clients' different demands and provide more low-price products, we separated it into many sub-reports with different specific themes. Technology and Competitive Environment of Enzyme in China is one of the sub-reports.

Owing to inadequate R&D investment in technology innovation and new product development, leading to weak competition of China's enzyme technologies, none of Chinese enzyme producers can rank among the top largest enzyme producers around the world now, and this situation will remain so in the near future. Chinese producers have fallen behind the foreign producers in Chinese market. Only some advantages such as lower manufacturing cost and huge potential market may inject some confidence and development room in domestic producers.

With intense competition, the enzyme industry in China has undergone great changes in recent years. On one side, China's enzyme industry has been dominated by some large scale producers and many small scale producers have been gradually washed out from the market. On the other side, foreign investors are playing a more and more important role in Chinese enzyme market.
