## Abstracts

### Description:

CCM has finished a market report named Future of Enzyme in China to 2020 in Feb 2010. In order to meet clients' different demands and provide more low-price products, we separated it into many sub-reports with different specific themes. Technology and Future Forecast of Enzyme in China is one of the sub-reports.

Owing to inadequate R&D investment in technology innovation and new product development, leading to weak competition of China's enzyme technologies, none of Chinese enzyme producers can rank among the top largest enzyme producers around the world now, and this situation will remain so in the near future. Chinese producers have fallen behind the foreign producers in Chinese market. Only some advantages such as lower manufacturing cost and huge potential market may inject some confidence and development room in domestic producers.

In order to provide comprehensive analysis on China's enzymes industry in recent years and its future prospects, questionnaire survey is conducted in this report, with total 11 respondents including enzyme professors and managers being interviewed on their views of China's enzyme industry.

The survey results unveil the following key issues keenly concerning the future of China's enzyme industry:

- What are the key factors influencing development of China's enzyme industry?
- What are the future opportunities and challenges for China's enzyme industry?
- Which kinds of enzyme are mainly exported and imported?
- What's the future performance for different enzymes in China?

## Contents

**INTRODUCTION**

**RESEARCH OBJECTIVES**

**SCOPE OF REPORT**

**METHODOLOGY**

**INFORMATION SOURCES**

**EXECUTIVE SUMMARY**

### **I TECHNOLOGY PROGRESS OF GLYCINE**

I-1 Brief introduction of chloroacetic acid ammonolysis process

I-2 Brief introduction of Strecker process

I-3 Brief introduction of hydantion process

I-4 Brief introduction of Sanxia Yingli's natural gas-HCN process

I-5 Development trend of glycine technology

## List Of Tables

### LIST OF TABLES

Table I-1.1 Raw material consumption of chloroacetic acid ammonolysis process in China, Oct. 2010

Table I-4.1 Raw material consumption of natural gas route in China, Oct. 2010

## List Of Figures

### LIST OF FIGURES

Figure I-1.1 Flowchart of chloroacetic acid ammonolysis process

Figure I-2.1 Flowchart of Strecker process

Figure I-3.1 Flowchart of the hydantion process

Figure I-4.1 Flowchart of Sanxia Yingli's natural gas route

## I would like to order

Product name: Technology Progress Survey of Glycine in China

Product link: <https://marketpublishers.com/r/T79D09AFBE1EN.html>

Price: US\$ 644.00 (Single User License / Electronic Delivery)

If you want to order Corporate License or Hard Copy, please, contact our Customer Service:
