Abstracts

Urea formaldehyde moulding compounds (UFM) appears as moulding compounds of thermoset, and is one of the moulding compounds of amine. Generally, there are two specifications for UFM in China, namely powder type and granule type. And the latter can be the post-processing product of the former, or as the direct products of urea and formaldehyde.

This report is the second edition of UFM in China published by CCM in 2016. After ten years' development, China's UFM market has changed a lot. The number of UFM manufacturers in China has decreased from 38 in 2007 to 15 as of late 2016. So, CCM has done deep research on China's UFM again to find more changes these years, such as production, price, consumption and technology. Details would be unfolded in this report as following aspects:

Capacity and output of UFM in China, 2015 & 2016

Major manufacturers of UFM in China, 2015 & 2016

Ex-works price of UFM in China, 2015 & 2016

Price trend of UFM in China

Application of UFM in China, 2015

Technology development of UFM in China

Forecast on UFM supply and demand in China, 2017-2020
