Abstracts

This report can be delivered to the clients within 7-10 Business Days.

CmaxInsight's "Acute Ischemic Stroke: Market Assessment, Epidemiology & Market Forecast-2028" report provides an overview of the disease and market size of Acute Ischemic Stroke for the seven major markets i.e., United States, EU5 (France, Germany, Italy, Spain, UK) and Japan. The Report covers epidemiology of Acute Ischemic Stroke from 2018 to 2028 segmented by seven major markets market along with market drivers, market barriers and unmet medical needs of this indication.

Research Scope

Acute Ischemic Stroke Overview and Treatment Landscape

The report provides comprehensive information of the disease overview by providing details such as disease definition, classification, symptoms, etiology, pathophysiology and diagnostic trends. The comprehensive details about treatment algorithms and treatment guidelines for Acute Ischemic Stroke in the United States, Europe, and Japan are also covered.

Acute Ischemic Stroke Epidemiology

This section of the report provides the country-specific information of historical and current patient pool and offers forecasted value for prevalent/ incident cases, along with diagnosed and treatable patient pool.

Acute Ischemic Stroke Marketed and Emerging Drug Landscape

A snapshot on the marketed and pipeline emerging drugs, along with comprehensive insight on emerging treatments based on their safety & efficacy results, mechanism of action, route of administration, therapeutic potential, regulatory success, launch dates, and other factors.

This section also covers latest news which includes agreements and collaborations,

approvals, patent details and other major breakthroughs.

Acute Ischemic Stroke Market Size and Segmentation

This segment of the report focuses on key question: “What is the size of the total & addressable market for Acute Ischemic Stroke”? This key question will help to answer whether the market is big enough to be interested in your business. Relevant and detailed patient segmentations are provided for each Indication, enabling to evaluate the commercial potential of the market.

Acute Ischemic Stroke Market Trends and Opportunities

Identify market trends and the opportunities by analyzing the impact of current therapies on the market, unmet needs, drivers and barriers and demand of better technology.

Acute Ischemic Stroke Unmet Needs

Discover the significant current and future unmet needs for the Acute Ischemic Stroke. Market requirements vary with different countries and geographies.

Methodologies

Our experts synthesize information from proprietary databases, syndicated reports, primary research and secondary data, such as company reports, press releases, published peer-reviewed journal articles, disease registries, and general news media to provide a complete picture of your market. Our approach ensures that every data point and inference goes through multiple validations while leveraging a variety of sources to formulate market and opportunity size.

Key Coverage and Benefits:

The report will help in developing business strategies by understanding the trends shaping and driving the global Acute Ischemic Stroke market.

The report provides detailed historical and forecasted epidemiological data of Acute Ischemic Stroke in the 7MM from 2018-2028.

Organize sales and marketing efforts by identifying the best opportunities for Acute Ischemic Stroke in US, Europe and Japan.

To understand the future market competition in the global Acute Ischemic Stroke and insightful review of the key market drivers and barriers.

To understand the regulatory scenario in major markets.

About

GlobalData estimates the 2018 COPD drug sales to be \$10.9B across the 7MM covered in this report. By the end of the forecast period in 2028, sales will increase to \$19.3B, which includes seven pipeline therapies.

The COPD market is mature with an abundance of drug options available, all of which work relatively well; however, there is still room for improvement. COPD is a market with a substantial number of unattained unmet needs, including stakeholders' recognition of symptoms, treatment that reverses the progression of COPD, and identification of biomarkers and appropriate prescribing of medication.

This is not common for a disease with such an established platform of treatment management and numerous marketed drugs. This is because of the multifactorial causes of the disease combined with a low diagnosis rate across the 7MM. COPD is named the "smoker's disease" since many of the afflicted individuals are or have been smokers for a lengthy period of their lives.

Occupational exposure including to organic and inorganic dusts, chemical agents, and fumes are under-appreciated as a risk factor for COPD with approximately 20% of cases attributed to workplace exposures. While smokers are warned that smoking is harmful for their health, most are unaware of the prevalence and risks of COPD and many fear the stigma of being labelled with a diagnosis. As a result, many patients avoid seeking help until it is too late and the disease has advanced significantly.
