Anesthesia machine is one of the necessary medical apparatuses in the hospital. Presently, China requires about 5,000 units of anesthesia machines annually, including about 3,000 lower-end ones, which are mainly provided by China's domestic producers, and 2,000 middle-to-high end ones, 80% of which are imported. The high-end anesthesia market is almost monopolized by foreign brands. About USD 30 million is invested in importing middle-to-high end anesthesia machines annually.

The report is based on the data from China's National Bureau of Statistics, the Development Research Center of the State Council, the Ministry of Commerce, National Information Center and lots of other databases.

It mainly provides detailed information and analysis of the anesthesia machine market size, the industry characteristics, the development direction and prospect, prediction, etc. Meanwhile, the development situation and financial situation of some leading enterprises in China are included, too.
