GBL (gamma-butyrolactone) is an excellent kind of high boiling solvent and important organic synthesis midbody. It has high solubility and good electrical property and stability. And it is safe and convenient to use.

GBL is mainly used in synthesis of ketopyrrolidine series products, like tranylcypromine, acetyl-GBL and so on. Moreover, GBL is widely used in agricultural chemical, polymer and dye and solvent for printing and extracting agent for petrochemical. GBL can be the raw material for producing spice, medical midbody, rust remover and plant growth regulators, etc.

The demand for GBL is growing continually along with the rapid development of the petrochemical industry and other associated industries.

The report is based on the data issued by the authority organizations like the National Bureau of Statistics of China, China Customs and China Petroleum and Chemical Industry Association, etc. It releases in-depth research results and analysis of China's GBL market.

2008 Research and Investment Constant Report on China's GBL Market is the most detailed GBL report of China up to now. It provides import reference for investing and getting to know the latest development trend of Chinese GBL industry.
