Executive Summary

There are four main causes of acne vulgaris: hyper-keratinization, excess sebum production, bacteria *Propionibacterium* and inflammation. Dermatologists have the most experience treating different types of acne. There are six types of acne: Acne Rosacea, Acne Cosmetica, Acne Fulminans, Acne Keloidalis Nuchae (AKN), Acne Chloracne and Acne Medicamentosa. Several treatments are available in the market nowadays with effective results. Acne can be treated through three therapies namely systematic therapy, topical therapy and physical therapy. Currently acne treatment market is dominated by topical therapy or topical drugs that are widely used by large number of population for acne treatment.

The global acne treatment market has shown upward trends over the past few years and projections are made that the market would grow at a steady pace over the forecasted period (2021-2025) also. Global acne treatment market is supported by a number of growth drivers such as rising disposable income, high global prevalence rate of acne, unhealthy eating habits, adoption of various less painful aesthetic combination therapy procedures etc. Yet, there are certain challenges such as entry of generic drugs, safety issue regarding products, increasing acceptance of ant-acne treatment, etc. that hinder the growth of the market.

Some of the latest trends related to the Acne treatment market that have been captured

in this report are efforts like acquisitions and collaboration by relevant players to expand their presence and scope of Artificial Intelligence (AI) technology within the Acne treatment market.
