Executive Summary

Alpha 1 antitrypsin is a type of plasma protein inside our body, it is called protease inhibitor. AAT is made in the liver and its function is to protect lungs and liver. Deficiency of AAT protein is caused by genetic defect. Adults with severe AAT deficiency develop emphysema. Smoking can increase the risk of emphysema. The market to replace AAT deficiency by replacement therapy has grown with in past 5-10 years.

The global AAT Replacement therapy market has increased at a significant CAGR during the span of 4 years i.e. 2012-2015 and projections are made that the market would rise in the next five years i.e. 2016-2020 tremendously. The market for AAT replacement therapy has increased significantly in these years because the people as well as doctors have become more aware of the disease. Earlier, patients suffering from AAT deficiency were treated like asthma patients or other COPD patients. But, now, doctors have access to better diagnostics tests that can detect disease at the early stage.

Improvement in the method of treatment is the major driver for the growth of the market, a number of technologies and diagnostics have been innovated to treat and diagnose the same. Thus, the increased awareness along with improved treatment signifies the upsurge in the AAT Replacement Therapy market. Also, the number the of prescriptions for AAT Replacement therapy have been reported to increase at an increasing rate, driving the market in the positive direction.
