Executive Summary

Anticoagulants which are also known as blood thinners are drugs that are prescribed to prevent blood from clotting or stop existing clots from getting larger. The drugs prevent harmful clots forming in heart, veins or arteries. Formation of clots in the blood can lead to heart attack or stroke. These drugs are used to treat strokes, myocardial infarctions, pulmonary embolisms, disseminated intravascular coagulation (DIC) and deep vein thrombosis (DVT)- all potentially life-threatening conditions. Anticoagulants work by interrupting the process involved in the formation of blood clots.

The most commonly prescribed anticoagulant is Warfarin. Newer types of anticoagulants are also available and are becoming increasingly common. These include rivaroxaban (Xarelto), dabigatran (Pradaxa), apixaban (Eliquis), and edoxaban (Savaysa/Lixiana). Warfarin and the newer alternatives are taken as tablets or capsules. There's also an anticoagulant called heparin that can be given by injection.

The global anticoagulants market has increased progressively over the years and the market growth was bolstered in 2020 owing to spread of COVID-19 pandemic. Furthermore, the market is expected to grow more increasingly during the forecasted years i.e., 2021-2025. The global anticoagulants market is supported by various growth drivers such as growing geriatric population, rising global healthcare expenditure, increasing diabetic population, escalating number of cancer patient, rising prevalence of cardiovascular disease, etc.

Yet, the market faces some challenges which are obstructing the growth of the market.

Some of the major challenges are numerous clinical limitations and bleeding risk. However, the growth of the market would be supported by numerous market trends such as rising prevalence of venous thromboembolism (VTE), direct oral anticoagulants (DOACs), etc. during the forecasted period.
