Executive Summary

The global antifungal market witnessed an upsurge at a significant CAGR during 2012-2015 and projections are made that the market would rise in the next five years i.e. 2016-2020 tremendously. The market is spread across the globe with the United States and Europe dominating the market, while Asia-Pacific and Latin America market are the fastest growing markets.

The antifungal market can be segmented on the basis of types of drugs into Polyene, Azole and Echinocandins. The Azole class of antifungals dominates the market followed, by Echinocandins and Polyene. Azoles are broadly categorized as Voriconazole, Imidazole, Triazole and Thiazoles. Of which, Voriconazole govern the market. Echinocandins antifungal class is subjugated by Caspofungin, while other antifungals include Micafungin, and Anidulafungin. The Polyene antifungal agents include Amphotericin B, Nystatin, and Natamycin. Though, Amphotericin B is the only widely used agent in the market.

The fungal infections do not usually result in severe ailment, but in people with weak immune system, minor fungal infections can move in the bloodstreams and conquer critical organs leading to the damage, called as invasive fungal infection. The global market for the invasive fungal infection increased significantly during 2010-2015 and is expected to upsurge further.

The major growth drivers for the global antifungal market are: the rise in the incidences

of fungal infection, aging population and unhygienic conditions all over the world. Despite the market is governed by various growth drivers, there are certain challenges faced by the market such as: antifungal resistance, traditional treatments for fungal infection, side-effects of antifungal medication and antifungal development failures. Some of the recent trends in the market include technological advancement, growth in resistant strains and generic competition.
