Executive Summary

Bioprocessing equipment (or biopharmaceutical manufacturing equipment) market encompasses a broad spectrum of equipments for specific functions and applications. It can be divided on the basis of process steps into upstream and downstream. On the basis of product type, the market can be bio processors, disposable filter cartridges, depth filters, tangential flow filtration devices etc. On the basis of application, the market can be split into Monoclonal Antibodies, Vaccines, Recombinant Proteins etc. In-house biopharmaceutical companies, contract manufacturing organization, R and D companies and academic institutes are the end users of these equipments. Single use (SUT) and stainless steel is the segmentation of the market according to technology.

The global bioprocessing equipment market is forecasted to grow at a healthy rate during the forecast period on the account of various growth drivers such as rising prevalence of chronic diseases, rising spending on healthcare and elevation in the number of approvals of biologics. The players in the bioprocessing equipment market

are confronted with challenge to keep their revenue inflow uninterrupted in the event of equipment malfunctioning. Also, stringent FDA inspection mechanism puts the operations of pharma companies at uncertain closure risks which in turn poses a threat of losing clients for bioprocessing equipment manufacturers.

Increasing adoption of SUT bioprocessing equipments, scope of continuous bioprocessing (CBP), spike in acquisition activity and technological innovations are some of the latest trends existing in the market.
