Executive Summary

Body in white or BIW is one of the many stages in automotive manufacturing under which a car body's sheet metal components have been welded together. Under BIW, assembling of car body sheet metal (consisting of hoods, doors, bumpers, trunks and deck lids) takes before the incorporation of other components such as engine, chassis, roof liners, door coverings, seats and plastic trim parts.

The Global BIW market can be segmented on the basis of technology and end user. On the basis of technology, the market can further be divided into cold stamping and hot stamping process. On the basis of end used, the market can be divided into inhouse and outsourced.

The global BIW market is expected to increase at a healthy rate during the forecast period (2017-2021). The global BIW market is supported by various growth drivers, such as upsurge in demand for passenger cars and light commercial vehicles, preference to light weight materials in the manufacturing of BIW components and increasing penetration of hybrid electric vehicles.

However, hurdles with carbon fibers and issues with hot stamping are some of the challenges faced by the market. Increasing outsourcing and emphasis on passenger safety are some of the latest trends in the global BIW market.
