Executive Summary

Orthodontics segment of dentistry deals with braces, which are used to align teeth and position them with regard to a person's bite. Besides braces, another upcoming technique is the clear aligners that move the teeth to give proper alignment, but are invisible and removable, unlike traditional braces.

The global clear aligner market is expected to increase at high growth rates during the forecasted period (2021-2025). Over the historic years, the global clear aligner market was supported by various growth drivers, such as increasing urban population, rising healthcare expenditure, increasing youth population, Rising Demand for Aesthetic Enhancement etc. The market also faces challenges, such as, less number of dentists in emerging countries, limited insurance coverage on orthodontic treatment, etc.

However, Covid-19 has led to closure of dental clinics due to lockdowns in various countries. The dentists are refraining from carrying out physical dental therapies as they believe it could potentially lead to rapid spreading of the Coronavirus. This in turn has dampened demand for various dental products such as consumables with one being clear aligners. Moreover, it is expected that the market for clear aligners would showcase recovery once the impact of Covid-19 subsides and lockdowns are relaxed.
