As more and more people using internet, the vulnerability to cyber attacks has increased manifolds. Therefore, the use of cloud security has become extremely essential for everyone in order to protect the sensitive data. Cloud security refers to the set of technologies, policies, controls, and services that secure cloud computing environments, applications, and infrastructure from cyber security threats. Cloud security is a form of cyber security.

The cloud security market can be segmented on the basis of security type, solution type, service model, deployment model, organization type, and application.

The global cloud security market has increased significantly during the years 2018-2020 and projections are made that the market would rise in the next four years i.e. 2021-2025 tremendously. The cloud security market is expected to increase due to the growing prevalence of cyber attacks, rising deployment of cloud-based platforms, increasing adoption of Internet of Things (IoT), surging government initiatives to support smart infrastructure projects, growing adoption of cloud-based in government departments, etc. Yet the market faces some challenges such as complexity of network
