## **Executive Summary**

The Credit Insurance sector can play a critical role in financial and economic development in various ways. The sector helps pool risk and reduces the impact of large losses on firms and households with a beneficial impact on output, investment, innovation, and competition. As financial intermediaries with long investment horizons, credit insurance companies can contribute to the provision of long-term finance and more effective risk management. Moreover, the credit insurance sector can also improve the efficiency of other segments of the financial sector, such as banking and bond markets. Demand for credit insurance continues to grow as new markets open up and trade continues to become more global. However, the market is clearly cyclical, with a strong correlation with GDP.

The Global Credit Insurance market is expected to witness expansion in the near future. The credit insurance market is a huge market with low penetration. This market has a huge yet unrealized potential. Regulatory and insolvency frameworks vary widely between different countries, and although there is generally an upward trend in corporate insolvencies, the differences in frameworks and in reporting standards make comparison difficult. These factors have contributed to an increased awareness of and focus on trade risks on credit.
