Executive Summary

There are mainly five types of disposable gloves, which include Latex Gloves (made of natural rubber), Nitrile Gloves (made of synthetic rubber), Vinyl Gloves (made of synthetic materials), Neoprene Gloves (made of synthetic rubber), and Poly Gloves (made of polyethylene). Each glove has its own benefits, and recommended in different situations.

Disposable gloves have a long history with continuously evolving new forms of gloves. The disposable gloves market can be segmented on the basis of product, material type, and application.

The global disposable gloves market has increased significantly during the years 2017-2020 and the market observed sudden spike in 2020 owing to spread of pandemic disease COVID-19. Furthermore, projections are made that the market would rise in the next four years i.e. 2021-2025 tremendously. The disposable gloves market is expected to increase due to increasing prevalence of chronic diseases, surging online sales of disposable gloves, growing preventive measures due to COVID-19 outbreak, escalating healthcare spending, favorable government and non-government organizations initiatives, rising usage of gloves in non-healthcare sector, etc.

Yet the market faces some challenges such as toxic reactions caused by disposable

gloves, volatility in raw material prices, etc.
