Executive Summary

Hand sanitizer refers to a hand antiseptic or hand rub, which is used to remove the infection-causing microorganisms present on the hands. There are mainly two types of hand sanitizers available in the market: Alcohol-based Hand Sanitizer and Alcohol-free Hand Sanitizer. Both options have their own benefits and drawbacks.

Hand sanitizers have a long history with continuously evolving new forms of hand sanitizers. The hand sanitizer market can be segmented on the basis of product type, distribution channel, composition, and end-use.

The global hand sanitizer market has increased significantly during the years 2017-2020 and the market growth observed sudden boost in 2020 owing to outbreak of pandemic disease COVID-19. Furthermore, projections are made that the market would rise in the next four years i.e. 2021-2025 tremendously. The hand sanitizer market is expected to increase due to rapid urbanization, rising millennial population, growing preventive measures due to COVID-19 outbreak, escalating healthcare spending, surging online sales of health sanitizers, favorable government and non-government organizations

initiatives, etc. Although the market faces some challenges such as health hazards associated with use of chemical ingredients in hand sanitizer, stringent government regulations, etc.
