## Executive Summary

The outsourcing of healthcare employees from third-party contractors to healthcare units is known as healthcare staffing. Healthcare staffing aids in the recruitment of competent and qualified healthcare workers. It also connects users with a wide group of specialists who can help to find different tactics and clinical knowledge. This, in turn, enhances patient satisfaction by providing appropriate staffing, ensures clinician quality, and improves hospital consumer evaluations of healthcare practitioners and systems, among other benefits.

The global healthcare staffing market can be segmented based on service type (Travel Nurse, Per Diem Nursing, Locums Tenens, and Allied); and application (Hospitals, Pharma, Clients, and Government Agencies).

The pandemic of COVID-19 wreaked havoc on the healthcare staffing industry at the beginning of the year 2020. High turnover rates and nurse and physician burnout are two well-known consequences. Patients' health is being harmed by a chronic scarcity of nurses and healthcare professionals in hospitals. Healthcare staffing has been more volatile than other employment sectors during the pandemic, which has tended to follow more traditional 'cyclical' trends - decreasing at the start of the pandemic when lockdowns were widespread and rising as the economy improved. Hospital executives are adopting a number of crucial steps to address the labor shortfall, which is projected

to fuel the healthcare staffing market growth.

The global healthcare staffing market has increased significantly during the years 2019-2020 and projections are made that the market would rise in the next four years i.e. 2021-2025 tremendously. The global healthcare staffing market is expected to increase due to the rising prevalence of chronic diseases, aging population, rising health spending, increasing temporary staffing, etc. Yet the market faces some challenges such as talent shortage, manual vendor management system processes, stringent regulations, etc.
