Executive Summary

HNB tobacco is a smoking device heated electronically equipped with the capacity to lower the level of harmful compounds that are generated at the high temperatures associated with combustion. HNB devices heats the tobacco and does not burn it resulting into generation of totally no ash and less smell when compared to conventional cigarettes.

Heat-not-burn products are different in comparison to e-cigarettes because the HNB uses of real tobacco. On the other hand, e-cigarettes make use of flavored liquid nicotine.

The global HNB tobacco market is expected to increase at a healthy rate during the forecast period (2017-2021). The global HNB tobacco market is supported by various growth drivers, such as increase in implied smoking population, preference to HNB tobacco over conventional and e-cigarettes backed by its vital benefits, spike in youth population and upsurge in purchasing power globally.

However, unfavorable government regulations and health risk of HNB tobacco cigarettes are some of the challenges faced by the market. Increasing global traffic to HNB websites, global players focusing on production expansion, new product innovations and dependence of HNB on battery industry are some of the latest trends existing in the market.
