Executive Summary

A medical device that is used for the management of insulin in the treatment of diabetes is known as an insulin pump. It is a small automated device almost similar to the dimension of a mobile phone. It is very convenient in use, as this can be easily carried on a belt or inside a pocket. The device contains buttons to program insulin and navigate through the menu, LCD color screen to show the programming, battery compartment and a reservoir compartment. There are various types of insulin pumps available in the market and the latest pump available in the market is patch pump which is technologically more advanced than traditional pumps.

The global insulin pump market has increased with a healthy growth rate over the years and is expected to increase further during the forecasted period (2017-2021). The global insulin pump market is supported by various growth drivers, increasing diabetic population, increased life expectancy, ageing population, new product innovation and expansion of global market etc. Yet, the market faces certain challenges, such as high cost of insulin pumps, threat from implantable insulin pump, invention of artificial pancreas and complicated software used in insulin pumps etc.
