## **EXECUTIVE SUMMARY**

Anti-psychotic refers to a class of medicine used for the treatment of psychosis and various other emotional and mental conditions. Psychosis consist of delusions, hallucinations, paranoia and disordered thought. It is a condition in which a person experiences thought disorder and personality changes. Long acting injectable anti-psychotics are a sub type of antipsychotics which were primarily developed to improve the treatment of schizophrenia.

The global long acting injectable anti-psychotic market can be studied on the basis of different products and on the basis of prescription. These products are different types of long acting injectable anti-psychotic namely Invega Sustenna/ Trinza, Risperdal Consta, Abilify Maintena, Zyprexa, Aristada and many more.

The global long acting injectable anti-psychotic market is expected to increase at a healthy rate during the forecast period (2017-2021). The global long acting injectable anti-psychotic market is supported by various growth drivers, such as increasing cases of schizophrenia, rising number of bipolar disorder patients and non adherence to oral anti-psychotic.

However, side effect associated with anti-psychotic and patent expiry of some of the leading brands are some of the challenges faced by the market. Aging demography, grant of approval to Trevicta in European Commission, third party proprietary

technologies and label expansion of Abilify Maintena are some of the latest trends in the global long acting injectable anti-psychotic market.
