EXECUTIVE SUMMARY

In the world of entertainment which consists of movies, music, games etc., online gaming is gaining more popularity as compared to music and film industry. Launch of a large number of adventurous games which include the PlayStation, Xbox, Nintendo, and more, provide gamers a more enjoyable and thrilling experience as compared to movies of long duration. An online game is that category of games which needs an internet connection and can enable two or more players to participate at the same time from different locations. These online games can also be played through consoles, smartphones and tablets or via peer-to-peer networks.

MMORPG (Massively Multiplayer Online Role Playing Games) are sub-genre of MMO games. MMORPG takes place in a persistent state world where thousands or millions of players are playing simultaneously and develop their own characters in a role-playing environment. The virtual world of this game is never static because the events would take place across the game even if the player is logged off.

The global MMORPG gaming market has increased at a significant growth rate over the past few years and projections are made that the market would grow at a rapid pace in the forecasted period i.e. 2017 to 2021. The global MMORPG gaming market is expected to grow on the back of rising smartphone penetration globally, rapid evolution of internet, emergence of console version of MMORPGs, emergence of gamification, technological advancements such as facial recognition and 3D scanning etc. Yet the growth of the market is restrained by some factors such as prevalence of piracy, fraudulent gaming activities, connectivity issues etc.
