Executive Summary

A pest can be defined as any living organism, which has the potential to cause harm to people, their animals, crops and other belongings, for instance, vital documents and heritage artifacts in homes, offices and museums, which leads to major economic losses. Pest control is a key process to eliminate these harmful pest from densely populated areas through natural as well as artificial pest control methods.

The global pest control market can be segmented on the basis of pest type, services and end-users. On the basis of pest type, the market can further be sub-segmented into insects, mites, nematodes, vertebrate pest, micro-organism & weeds and parasitic plants. On the basis of services, the market can be divided into chemical, biological and other pest control services, which consist of mechanical pest control services. On the basis of end-users, the market can be segmented into commercial, residential and others, which includes use of pest control for agricultural and industrial purposes.

The global pest control market is expected to grow at a healthy rate during the forecast period (2017-2021). The growth is expected on account of many factors, such as an increase in population and economic activity, rising urbanization, prevalence of high global temperature and upsurge in disposable income.

However, the market also faces some challenges such as stringent industry regulations, staff management problems on the part of pest control service companies and high cost for customers. Introduction of new biocides, use of smart technologies such as route optimization software & mergers and acquisitions are some of the latest trends in this industry.
