EXECUTIVE SUMMARY

Point of sale (POS) refers to capturing of data related to customer payment information when goods and services are bought and sold at any physical location or on online platform. POS transaction can be captured using a variety of devices via computer, barcode and optical scanner, magnetic card readers or any combination of such devices. Point of sale (POS) terminals market has gained significant momentum in recent years due to the ease of use, enhancing customer experience and improved return on investment being offered by these systems.

Point of sale has applicability in millions of retail business, education, supermarkets, hospitality businesses, healthcare, etc. The major functions of POS Terminals are: calculate cash due for every value entered, keep track of cash in the cash drawer, calculate labor and payroll data, record information on repeat customers, record daily check averages for every worker, etc.

The POS terminals market can be segmented according to the components, into

hardware POS terminals and software POS terminals. The POS terminal market can also be segmented according to the product type, into fixed POS terminals and wireless/mobile POS terminals. The POS Terminal market could also be segmented on the basis of technology into NFC enabled POS terminals and non-NFC enabled POS terminals.

The global POS terminal market has increased at a significant CAGR during the years 2014-2018 and projections are made that the market would rise in the next four years i.e. 2019-2023 tremendously. The POS terminal market is expected to increase due to rising e-commerce sales, growing adoption of smartphones, technological upgradation, rising number of electronic payment transactions, adoption of cloud technology etc. Yet the market faces some challenges such as, non compliance to PCI, low POS terminal penetration rate in ASEAN countries, and selection of wrong POS.
