## Executive Summary

Sauna is a Finnish word meaning bath or bath house. Sauna is a small room which was traditionally constructed with a wooden interior and is used as a hot air steam bath for cleansing and refreshing the body. The roots of spa and sauna culture dates back to the Neolithic Age. Although today, sauna culture is considered to come from Finland as with the scares of syphilis in 1500s, the culture died in most of the Europe except the country.

The first saunas were dug into a trough in the ground. The saunas then evolved to being build above the ground with wooden logs and then to using metal woodstove with a chimney. The heating technology also evolved from wood burned to electric and to infrared. The therapeutic properties of spa and sauna can help in treating arthritis, allergies, skin ailments and chemical sensitivity. Although, prolonged sessions in a sauna increase the risks of dehydration which can lead to low blood pressure and loss of consciousness.

Spa and sauna component market can be segmented on the basis of products, equipment and application. On the basis of equipment spa and sauna can be further segmented into installation, maintenance and repair services, sauna components and heaters and sauna and spa room structures, control units and accessories

The global spa and sauna component market has increased at a significant CAGR during the years 2013-2017 and projections are made that the market would rise in the next four years i.e. 2018-2022 tremendously.

The spa and sauna component market is expected to increase due to growing wellness tourism, increase in employment, rising consumer expenditure, rising urban population, etc. Yet the market faces some challenges due to high cost involved with spa and sauna components.
