## Executive Summary

The desalination market can be segmented on the basis of technology, application and product. On the basis of technology, it can be segmented into reverse osmosis, multi stage flash distillation and multi effect distillation. On the basis of application, it can be segmented into municipal and industrial on the basis of application. On the basis of product, it can be segmented into membrane systems, pumps and evaporators.

The global desalination market is expected to grow at a healthy rate during the forecasted period (2016-2020). The key reason behind this anticipated growth is increasing population which is putting burden on the existing and depleting ground water supply. The widening gap between the demand and supply of water is further fuelling the demand for desalination.

Further, the cost of up gradation of poor water infrastructure is a costly process and therefore governments of many countries are investing in desalination plants.
