## Executive Summary

Wealth management is defined as procedures, which provides financial planning by a designated wealth advisor/managers. The wealth management procedures involve financial services such as investment advice, assets management, accounting, tax services, retirement planning and legal or estate planning. The total market value of assets and investments managed by a wealth management organization is known as assets under management (AUMs).

The wealth management industry structure is divided into six different categories such as retail, direct, broker-dealer independent RIA, full service firms/ wirehouse, private banks, regional banks with trust companies and multi-family offices.

The different types of wealth management products and services are structure investment products, which offers a fixed investment outcome; private banking and services, which provide more personalized financial services to HNWIs; traditional investment products, which includes bond shares, real estate, banking, etc; estate or retirement planning, which includes management of assets in the event of death or planning for regular income after paid work ends; and private wealth management or personal wealth management, which incorporates financial planning portfolio and other aggregated financial services.

The global wealth management market is expected to increase at high growth rates during the forecasted period (2018-2022). The global wealth management market is supported by various growth drivers, such as, increasing high net worth individuals (HNWIs) population, budding global GDP, upsurge in global urban population, etc. Whereas, come challenges such as resistance to accept technology in wealth management, stringent regulations, etc. obstruct the market growth.
