Executive Summary

The electrical products are the machines powered by electricity. The electrical products refers only to the components that are part of the electrical distribution system, such as electrical switchboards, circuit breakers and disconnect, electricity meter, electrical raceways, etc. Electrical raceways are the sub-segment of the entire electrical product market. The electrical raceways are the protective covers to safeguard the stray electrical wires and cables that may pose a threat if left unattended. The electrical raceway market can be segmented on the basis of intrinsic nature (rigid and flexible), on the basis of material composition (PVC, aluminium, others), on the basis of deployment (construction, agriculture, etc.) and on the basis of product type (electrical conduit, raceway tools, cable management, etc.).

The United States Electrical Raceway market has increased at a significant CAGR during the years 2012-2015 and projections are made that the market would rise in the next four years i.e. 2016-2020. The electrical raceway market is expected to increase due to growth in construction industry, increasing non-residential construction, rising healthcare expenditure, etc. Yet the market faces some challenges such as, volatile weather conditions, high costs of raw materials, installation barriers, etc.
