## Executive Summary

At-Homecare is health care or supportive care provided by a professional caregiver in the individual home where the patient or client is living, as opposed to care provided in group accommodations like clinics or nursing homes. Homecare is also known as domiciliary care, social care, or in-home care. It comprises a range of activities, especially paramedical aid by nurses and assistance in daily living for ill, disabled, or elderly people. Occasionally, palliative and end-of-life care can be provided through home health nursing. Home health nurses may assist patients with activities of daily living (ADLs) such as bathing, toileting, and feeding, or they direct and supervise the aide in providing ADL care.

The US at-home care market can be segmented based on service type (Home Healthcare & Nursing Care, Home Hospice, Non-Medical Home Care, Home Therapy Services, and Others).

The healthcare industry witnessed a shift in trends towards home healthcare as compared to hospital care due to revised norms with regards to the COVID-19 pandemic. The awareness for home healthcare services increased in 2020 as these services are safer and cost-effective alternatives to hospital services. Also, service providers are expanding their portfolio by offering services, such as at-home COVID-19 testing. Even though the fear of COVID-19 infection is still high, the new forms of work organization and Infection prevention and control (IPC) policies and practices have provided a path for continued home care services.

The US at-home care market has increased during the years 2017-2020 and projections are made that the market would rise in the next four years i.e. 2021-2025 tremendously. The US at-home care market is expected to increase due to the aging population, increasing prevalence of chronic diseases, increasing per capita personal income, low-cost setting, etc. Yet the market faces some challenges such as lack of supporting infrastructure, the risk to patient safety, etc. Moreover, the market growth would succeed by various market trends like increasing use of telemedicine, increasing IoMT and more acute care, etc.
