EXECUTIVE SUMMARY

Coffee is considered as one of the most popular beverages around the globe. It is highly rich in antioxidants and provides some of the essential nutrients which is associated with a healthy profile in customers and therefore considered as one of the functional food. Coffee is popular among the US population since decades and the revolution continues to grow in the coming years as well. With the introduction of wide number of coffee variants in the US, the consumption of beverage is going to increase at a rapid pace. On the basis of types, coffee can be classified into two: Coffea Arabica and Coffea Robusta.

Different consumers have developed a different taste for coffee in the US, therefore on the basis of preferences, five types of coffee are available in the US market: standard fresh ground coffee, fresh ground coffee pods, ready-to-drink coffee, fresh coffee beans, and instant coffee.

The US coffee market has grown over the past few years and is anticipated to grow tremendously during the forecasted period also i.e. 2018-2022 on the back of rising consumption of coffee by millennial population in the region.

The growth in the market will be driven by growing out of home coffee consuming population, introduction of ready-to-drink coffee, increasing penetration of premium coffee shops, increasing demand of green coffee etc. Yet the market growth is restrained by factors such as stringent regulations, weather uncertainties and retail consolidations.
