## Executive Summary

Library expenditure means spending of money by the libraries on books, printed materials, periodicals, digital materials, furniture, documentation, etc. Library expenditure is generally undertaken for the development, maintenance, and day-to-day functioning of the libraries. An adequate amount of funds is an essential requirement to incur library expenditure. The available funds are then allocated by spending money on various products and services in libraries.

There are several factors that affect library expenditure, which include the size of the library, location, types of library services, rising costs, and period covered. And, the main sources of library funding are tax, tuition, fundraising, fines, and fees.

Library expenditure can be segmented on the basis of components, which include Materials and Other Expenses. Materials include expenditure on library resources, such as journals, research databases, etc. Library materials expenditure is further segmented into three categories: Ongoing Subscriptions, One-Time Materials, and Other Materials.

The US library expenditure market has increased at a significant CAGR during the years 2017-2021 and projections are made that the market would rise in the next four years i.e. 2022-2026 tremendously. The library expenditure market is expected to increase due to an increasing number of academic libraries, rising higher education enrollment, growing higher education research & development (R&D) expenditures, soaring urban population, increasing spending on automation in the library, etc. Yet the market faces some challenges such as budget constraints, availability of open-source software, etc.
