## Executive Summary

The US rosacea market has grown over the past few years and is projected to grow at a high growth rate on the back of rising incidence of disease, and aging population. The growth in the market will be driven by unhealthy eating habits and environmental factors, rising disposable income, ageing population, escalating healthcare expenditure, high prevalence of rosacea, etc. Yet the market growth is restrained by factors such as lack of awareness and knowledge and stringent government regulations for the approval of new drugs.

The Covid-19 pandemic has led to decline in appointments of rosacea patients with dermatologists mainly due to travel restrictions. Thereby, impacting the market growth negatively as far as 2020 is concerned.
