## **Abstracts**

Asia-Pacific Fluoroscopy and C Arms Market is expected to reach at a CAGR of 5.1% in the forecast period of 2018 to 2025. The new market report contains data for historic year 2016, the base year of calculation is 2017 and the forecast period is 2018 to 2025.

### **Market Segmentation**

By Fluoroscopy Type (Conventional Fluoroscopy Systems, Remote-Controlled Fluoroscopy Systems), C Arm Type (Fixed C-Arms, Mobile C-Arms), C Arm Technology (Flat Panel, Image Intensifiers), Application (Diagnostic Applications, Surgical Application, Discography), End User (Hospitals, Diagnostic Centers, Specialty Clinics), Geography (Asia-Pacific)

Major growing sectors under the market segmentation are as follows:

In fluoroscopy type, the conventional fluoroscopy systems are dominating the fluoroscopy market as the system offers reduced patient dose along with a better image quality. Moreover, remote-controlled fluoroscopy systems are growing in the market as it offers fluoroscopy and radiography sequences for interventional procedures.

In C arms type, the fixed C arms are dominating the market as the systems are economically strong and durable which is used for fluoroscopic imaging procedures as well as pain care imaging studies. Mobile C arms are growing in the near future as the systems are compact, portable with affordable prices and manage the workflow single-handedly with speed and ease.

In technology, the flat panels are dominating the market due to technologically advanced detectors commercially available around early 2000s. The advantages such as size of physical package, flat input window and grayscale latitude makes this technology more demanding as it offers accurate images than traditional image intensifiers.

In application, the fluoroscopy systems are highly used for imaging and treatment of patients. The technology is more intended towards imaging first and then later on for treatment purposes therefore the diagnostic sector has high applications than surgical.

In end user, Hospitals are highly preferred by the patients for diagnosis and treatments. Fluoroscopy technology is used for various diagnostic purpose including bones, muscles, joints, as well as of heart, lungs, and kidneys. The technology is advanced and offer high precise results in affordable prices which can be done in hospitals than diagnostic centers and specialty clinics.
