Abstracts

Europe breast lesion localization methods market is expected to reach a CAGR of 12.4% in the forecast period of 2018 to 2025. The new market report contains data for historic year 2016, the base year of calculation is 2017 and the forecast period is 2018 to 2025.

Market Segmentation

By Type (Wire Localization, Radioisotope Localization, Magnetic Tracers, Others), Biopsy Techniques (Fine Needle Aspiration Biopsy, Core Needle Biopsy, Vacuum-Assisted Core Biopsy, Surgical Biopsy), End User (Hospitals, Oncology Clinics, Diagnostic Centers, Ambulatory Surgical Centers), Country (Germany, France, U.K., Italy, Spain, Russia, Switzerland, Netherlands, Turkey, Belgium, Rest of Europe)

Major growing sectors under the Market Segmentation are as follows:

In type, wire localization is dominating the market because it is a technique used to find the area which is seen on the mammogram but not easily felt as lump. This process is performed before the excisional biopsy to remove the lump. This procedure helps the surgeons to remove small amount of normal tissue and avoid unnecessary deformity of the area.

In biopsy techniques, fine needle aspiration biopsy is the dominating the market as it is the most common type procedure where thin or hollow needle is attached to a syringe inserted into an area of abnormal-appearing tissue or body fluid to withdraw a small amount of tissue or fluid from a suspicious area..

In end user, hospitals segment is dominating in the market as health care institution providing patient treatment with specialized medical and nursing staff and medical equipment. In hospitals the breast cancer detection room is well staffed with radiologists, surgeons, physicians and also it is equipped with diagnostic tools.

Key Market Players

The Key Market Players for Europe breast lesion localization methods market are listed below:
