Major growing sectors under the market segmentation are as follows:

On the basis of step the market is segmented into data, analysis, and instrument installation, monitoring and reporting. The market for data analysis expected to dominate the market as it is considered as the primary step while going through Geotechnical Instrumentation and Monitoring system. Moreover, before instrumentation and monitoring data analysis for a particular project is essential.

On the basis of type of offering the market is segmented into hardware, software and services. The hardware segment is further sub segmented into data acquisition systems, sensors, piezometers, extensometers, inclinometers and others. The services segment is further sub segmented into data analysis, real-time monitoring services, rental and related services and mitigation services. Service segment is estimated to grow at growing rate the demand for real time monitoring services is growing

On the basis of technology the market is segmented into wired network technology and wireless technology. The demand for wireless technologies has been increasing in the recent times due to advent of technologies and industries going more inclined towards advanced technologies for geotechnical instrumentation and monitoring, furthermore the wireless technologies also promote portability

On the basis of application areas the market is segmented into pore water pressure, soil stresses, lateral deformation and vertical deformation.

On the basis of structure the market is segmented into buildings and utilities, tunnels and bridges, dams and other structures. Tunnels and bridges will grow at the highest CAGR due to growing infrastructural activities in the emerging countries which is growing the market for geotechnical instrumentation & monitoring in tunnels and bridges.

On the basis of industry vertical the market is segmented into construction and infrastructure, mining, energy and power, oil and gas, agriculture and others. Mining is growing with the highest CAGR as the growing hazards while mining and going through the sudden calamities for the workforce as well as the particular area has led to increase the market for geotechnical instrumentation & monitoring in mining.
