Major growing sectors under the market segmentation are as follows:

In type, the arsenic heavy metal testing are highly used because arsenic is the most commonly found heavy metal in food and beverage products. Coal ash produced in power plants during electricity production is usually thrown in landslides which is the biggest cause for arsenic contamination Middle East and Africaly.

In technology, Atomic Absorption Spectroscopy heavy metal testing is growing at a decent CAGR due to advancement in technology which helps in better testing through Atomic Absorption Spectroscopy.

In sample, blood sample is growing with highest CAGR rate because of growing contamination of heavy metals in water, especially in Africa region.

In application, environment is growing with highest CAGR because of the growing usage in generic food and water testing.
