Market Segmentation

By Type (Animal Protein Hydrolysates, Plant Protein Hydrolysates, Other), Form (Powder, Liquid), Application (Infant Nutrition, Dietary Supplements, Sports Nutrition, Nutraceuticals, Clinical Nutrition, Animal Feed, others), Source (Animal, Plant, Others), Method (Acid & Alkaline Hydrolysis, Enzymatic Hydrolysis), Countries (South Africa and rest of Middle East & Africa)

Major growing sectors under the market segmentation are as follows:

In type, the animal protein hydrolysates holds largest share in the market as animal bi products have good source of bioactive peptides. Animal protein hydrolysates have many positive effects on the consumers.

In form, the protein hydrolysates are manufactured through various methods such as enzymatic, acid or alkali and with different degree of hydrolysis and are majorly produced in the powder form. The powder form is dominating the market as it has long shelf life than liquid.

In application, infant nutrition is dominating the market as protein hydrolysates are heavily hydrolyzed proteins can be easily digested by the infants. These products have considerably reduced immunological reactivity and therefore they are highly preferred for the infants. The whey and casein hydrolysates are

gaining popularity in sports nutrition as it induces rapid increase of amino acids during workout and maximize the muscle protein anabolism and facilitate recovery.

In source, the animal sources such as poultry, bovine are highly preferred for the production of protein hydrolysates as it has many antimicrobial, antioxidant, antihypertensive and immunomodulatory activities. The animal segment act as a good source of amino acids and therefore it has many potential applications in food technology such as ?avorings, functional ingredients for human as well as animal feed.

In method, the enzymatic hydrolysis is highly preferred for the production of hydrolysates as the enzyme break the specific or particular bond that provides better flavor.
