## Abstracts

Middle East and Africa sludge treatment market is expected to reach at a CAGR of 5.4% in the forecast period of 2019 to 2026. The market report contains data for the historic year 2017, the base year of calculation is 2018 and the forecast period is 2019 to 2026

### Market Segmentation

By Source (Municipal Sludge Treatment and Industrial Sludge Treatment), By Sludge Type (Primary Sludge, Secondary Sludge, Tertiary Sludge, and Mixed Sludge), By Processes (Thickening, Stabilization and Dehydration), By Country (South Africa, U.A.E., Saudi Arabia, Israel and Rest of Middle East and Africa)

Major growing sectors under the Market Segmentation are as follows:

Based on Source, industrial sludge treatment is growing at highest CAGR. Owing to the rapid industrialization in the MEA region, the industrial segment is expected to grow at the highest CAGR.

Based on sludge type, primary sludge is expected to grow at the highest CAGR, during the forecast period of 2019-2026. As the quantity of this type of sludge is usually found higher in the various processes of sludge treatment when compared with secondary, mixed and tertiary sludge.

Based on processes, thickening process is anticipated to grow at the highest CAGR among all. It is majorly due to the low cost of the process, when

compared to dehydration and stabilization process. Thickening process typically involves an agglomeration and settling operation in a stir vessel or tank. Whereas, dehydration is more expensive and involves sludge compression in order to make drier and denser sludge.
