Abstracts

The Antibody Drug Conjugates Size, Share, Industry, Forecast and outlook (2024-2031) was valued at in and is anticipated to reach by , at a CAGR of xx% from 2026 to 2032.

The report delivers in-depth insights into key market dynamics, including regional growth trends, market segmentation, CAGR projections, and the revenue performance of leading industry players. It also highlights major growth drivers shaping the market landscape. Designed to provide a clear and comprehensive perspective, the report offers a detailed view of the current market size in terms of both value and volume, along with emerging opportunities and the overall development outlook of the Antibody Drug Conjugates Size, Share, Industry, Forecast and outlook (2024-2031).

This report delivers a comprehensive overview of the Antibody Drug Conjugates Size, Share, Industry, Forecast and outlook (2024-2031), with both quantitative and qualitative analyses, to help readers develop growth strategies, assess the competitive landscape, evaluate their position in the current market, and make informed business decisions regarding Antibody Drug Conjugates Size, Share, Industry, Forecast and outlook (2024-2031). The Antibody Drug Conjugates Size, Share, Industry, Forecast and outlook (2024-2031) size, estimates, and forecasts are provided in terms of output/shipments (K MT) and revenue (US\$ millions), with 2025 as the base year and historical and forecast data for –.

Antibody Drug Conjugates Size, Share, Industry, Forecast and outlook (2024-2031)
Scope:

Major Highlights

This report delivers a comprehensive overview of the Antibody Drug Conjugates Size, Share, Industry, Forecast and outlook (2024-2031), with both quantitative and qualitative analyses, to help readers develop growth strategies, assess the competitive landscape, evaluate their position in the current market, and make informed business decisions regarding Antibody Drug Conjugates Size, Share, Industry, Forecast and outlook (2024-2031). The Antibody Drug Conjugates Size, Share, Industry, Forecast and outlook (2024-2031) size, estimates, and forecasts are provided in terms of output/shipments (K Sqm) and revenue (US\$ millions), with 2025 as the base year and historical and forecast data for –.

This report will assist keyword manufacturers, new entrants, and companies across the industry value chain with information on revenues, production, and average prices for the overall market and its sub-segments, by company, by Type, by Application, and by region.

Regional Analysis:

North America (U.S., Canada, Mexico)

Europe (U.K., Italy, Germany, Russia, France, Spain, The Netherlands and Rest of Europe)

Asia-Pacific (India, Japan, China, South Korea, Australia, Indonesia Rest of Asia Pacific)

South America (Colombia, Brazil, Argentina, Rest of South America)

Middle East & Africa (Saudi Arabia, U.A.E., South Africa, Rest of Middle East & Africa)

Partner Identification

Increase Your Customer Base by 3X using our Partner Identification tool

Uncover strategic collaboration opportunities with DataM vetted partners aligned to your ecosystem.

Identify high potential M&A targets based on synergies, market positioning and

growth trajectory.

Prioritize partners by strategic fit rather than general capability.

Why Choose DataM?

Data-Driven Insights: Dive into detailed analyses with granular insights such as pricing, market shares and value chain evaluations, enriched by interviews with industry leaders and disruptors.

Post-Purchase Support and Expert Analyst Consultations: As a valued client, gain direct access to our expert analysts for personalized advice and strategic guidance, tailored to your specific needs and challenges.

White Papers and Case Studies: Benefit quarterly from our in-depth studies related to your purchased titles, tailored to refine your operational and marketing strategies for maximum impact.

Annual Updates on Purchased Reports: As an existing customer, enjoy the privilege of annual updates to your reports, ensuring you stay abreast of the latest market insights and technological advancements. Terms and conditions apply.

Specialized Focus on Emerging Markets: DataM differentiates itself by delivering in-depth, specialized insights specifically for emerging markets, rather than offering generalized geographic overviews. This approach equips our clients with a nuanced understanding and actionable intelligence that are essential for navigating and succeeding in high-growth regions.

Value of DataM Reports: Our reports offer specialized insights tailored to the latest trends and specific business inquiries. This personalized approach provides a deeper, strategic perspective, ensuring you receive the precise information necessary to make informed decisions. These insights complement and go beyond what is typically available in generic databases.

ANTIBODY-DRUG CONJUGATES

- The “Antibody-Drug Conjugates (ADCs) – Pipeline Insights, 2018? report covers an in-depth analysis of antibody-drug conjugate drug molecules currently undergoing clinical studies.
- It provides a deep understanding of potential antibody-drug conjugate drug molecules across all drug development phases.
- The report assesses the pipeline antibody-drug conjugate molecules by stage of development (discovery, pre-clinical, IND, Phase I, Phase II, Phase III and pre-registration), by recruitment status (recruiting, active not recruiting, completed, NA, and unknown), therapy type (monotherapy, combination products) molecule type (monoclonal antibodies, linker, drug/toxin, and others) and route of administration (oral, IV, and others). The report provides a snapshot of discontinued and dormant drugs too.
- Also, the report includes critical insights on other development activities, including (but not limited to) – licensing, collaborations, acquisitions, funding, patent, and regulatory designations.
- The report covers company profiles key players in developing antibody-drug conjugate drug molecules. The company profile includes essential info on overview, financial highlights, product portfolio, business strategies, and key recent developments.

MARKET OUTLOOK

- Antibody Drug Conjugates (ADCs) formed by monoclonal antibodies with linkers and chemotherapy drug has better tumor targeting effects with less toxic side effects compared to traditionally developed chemotherapy drugs.
- As the number of naked antibodies as single agents showing clinical efficacy remains limited, these biological antibodies are playing an essential role in cancer treatment.
- The only way to enhance the therapeutic potential of antibodies is to conjugate them to small drug molecules.
- This combination is targeted to bring together the beneficial effects of highly potent drugs on the one side and selective binders of the specific tumor antigens on the other hand.
- Additionally, producing an ADC is more complicated, which needs a thoughtful combination of antibody, linker, and drugs used for targeted and a defined cancer treatment condition.

WHAT'S TRENDING IN THIS MARKET?

- Improvement of the ADC technology guides the design of improved drug compounds that are now in clinical trials, and the results gathered from first-generation antibody-drug conjugate (ADC). Brentuximab vedotin (Adcetris) is an anti-CD30 antibody conjugated to a microtubule inhibitor is the only marketed ADC today available for the

treatment of Hodgkin's lymphoma and anaplastic large cell lymphomas.

- Several ADCs are currently undergoing clinical trials that are showing beneficial effects in both hematological malignancies and stable tumor conditions.
- Among the ADC, T-DM1 (trastuzumab emtansine), which comprised of trastuzumab conjugated to DM1, with a non-cleavable linker, demonstrated promising results in phase III clinical trial used for the treatment of HER2-positive refractory/relapsed metastatic breast cancer.
- Other drug compounds, including CMC-544, CDX-011, SAR3419, PSMA-ADC, IMGN901 and BT-062 are currently in clinical trials that target different antigens and having different linker and drugs molecules. This will contribute to the learning curve of ADC, as like the discontinued ADC.
- In total, 37 active clinical trials involving ADCs are initiated currently, and a significant progression of the pipeline is only observed in Phase 1, and two clinical trials with an almost equal number of studies and only limited studies are in phase 3 trails that will add growth to the market.
- Recently, two ADCs entered the clinic: Genmab's MMAE-conjugated HuMax-AXL-ADC that is in Phase 1/2 development used for five different types of solid tumors (ovary, endometrium, cervix, thyroid, and lung). Along with them, a PBD-conjugated ADC for multiple myeloma (SGN-CD352A), was added to the clinical pipeline. Recently, inotuzumab ozogamicin gained EMA approval for the treatment of relapsed/refractory b-cell precursor acute lymphocytic leukemia.

MARKET GROWTH ANALYSIS

- The high cost of production, lack of experienced manufacturers and regulatory challenges are slowing down the growth of the Global ADCs Market.
- The linking of drug compounds to a careful selection of the targets, a better insight on ADCs mechanism of action, the controlling and knowing of ADC off-target toxicities, and also the range of required clinical settings like patient selection, dosing regimen of the molecules that bring highest clinical benefit are the current challenges that will add to the improvement of the drug therapeutic index.
- The primary drivers for the global antibody-drug conjugates market include increasing incidences of cancer types, advances in drug linking technologies, efforts regarding patent protection and growing demand to the antibody drug conjugates.

THE SCOPE OF THE REPORT

- Provides comprehensive understanding of active antibody-drug conjugate pipeline drug candidates
- Includes complete pipeline product coverage with segregation by various stages of the pipeline from discovery to late-stage.
- Offers pipeline assessment by monotherapy, combination therapy products, and route of administration

- Provides a comparative analysis of key marketed products and pipeline drug candidates
- Includes detailed pipeline drug profiles covering – product description, chemical information, molecule type, mechanism of action, route of administration, product safety and efficacy, developers and collaborators
- Provides essential info on players involved in clinical R&D of antibody-drug conjugate drug candidates.
- Provides in-depth coverage of crucial news related to antibody-drug conjugate drug molecules, including significant mergers and acquisitions and product development updates such as clinical trial progression updates and regulatory updates.

WHY SHOULD I PURCHASE THIS REPORT?

- To obtain an understanding of the current antibody-drug conjugate pipeline landscape.
- To determine drug development dynamics and leverage it for innovation of novel or repositioned drugs.
- To valuably optimize R&D activities in-line with robust therapeutic drug markets.
- To devise strategic initiatives by identifying prospective partners with progressing projects.
