## **OVERVIEW**

Abexinostat (Xynomic Pharmaceuticals) is a broad histone deacetylase (HDAC) inhibitor. HDAC enzymes (also known as lysine deacetylase) cleave acetyl groups from N-acetyl lysine amino acids on a histone. HDAC inhibition leads to highly acetylated histones and chromatin reshaping. In addition to altering histone acetylation, HDAC inhibitors can also influence the degree of acetylation on non-histone proteins, increasing or repressing their activity. Xynomic Pharma Received Fast-Track Designation from the US FDA for Abexinostat as 4L Therapy Treating Follicular Lymphoma. It is currently in Phase II for Follicular Lymphoma and is being developed by Xynomic Pharmaceuticals.
