Abstracts

This report can be delivered to the clients within 24 Hours

DelveInsight's, "Acute Liver Failure – Pipeline Insight, 2021," report provides comprehensive insights about 5+ companies and 5+ pipeline drugs in Acute Liver Failure pipeline landscape. It covers the pipeline drug profiles, including clinical and nonclinical stage products. It also covers the therapeutics assessment by product type, stage, route of administration, and molecule type. It further highlights the inactive pipeline products in this space.

Geography Covered

Global coverage

Acute Liver Failure Understanding

Acute Liver Failure: Overview

Acute liver failure is an uncommon condition in which rapid deterioration of liver function results in coagulopathy. Acute liver failure is loss of liver function that occurs rapidly — in days or weeks. Acute liver failure, also known as fulminant hepatic failure, can cause serious complications, including excessive bleeding and increasing pressure in the brain. Signs and Symptoms of Acute liver failure include: pain in right abdomen, yellowing of skin, nausea, vomiting, sleepiness and disorientation of confusion. Tests and procedures used to diagnose acute liver failure include: blood tests and imaging tests for the examination of liver. When acute liver failure cannot be reversed the only treatment may be the liver transplant.

'Acute Liver Failure - Pipeline Insight, 2021' report by DelveInsight outlays comprehensive insights of present scenario and growth prospects across the indication. A detailed picture of the Wilson's Disease pipeline landscape is provided which includes the disease overview and Acute Liver Failure treatment guidelines. The assessment part of the report embraces, in depth Acute Liver Failure commercial assessment and clinical assessment of the pipeline products under development. In the report, detailed description of the drug is given which includes mechanism of action of the drug, clinical studies, NDA approvals (if any), and product development activities comprising the technology, Acute Liver Failure collaborations, licensing, mergers and acquisition, funding, designations and other product related details.

Report Highlights

The companies and academics are working to assess challenges and seek opportunities that could influence Acute Liver Failure R&D. The therapies under development are focused on novel approaches to treat/improve Acute Liver Failure.

Acute Liver Failure Emerging Drugs Chapters

This segment of the Acute Liver Failure report encloses its detailed analysis of various drugs in different stages of clinical development, including phase II, I, preclinical and Discovery. It also helps to understand clinical trial details, expressive pharmacological action, agreements and collaborations, and the latest news and press releases.

Acute Liver Failure Emerging Drugs

Hepastem: Promthera Biosciences

HepaStem is Promethera's lead cell therapy product currently in Phase 2 clinical trials for Acute Liver Failure. It consists of human allogeneic liver-derived medicinal signaling cells that are obtained from healthy, ethically donated organs and expanded in the manufacturing GMP factory. HepaStem is administered as a simple peripheral intravenous infusion, after which it is transported via the bloodstream to the liver, where it is expected to act as a cargo and activate multiple key pathogenetic pathways.

TAK-242: Akaza Biosciences

Akaza Bioscience is preparing to run a Phase II study of TAK-242, a novel immunological therapy. TAK-242 is an innovative, novel treatment option which aims to

address unmet clinical need and improve short-term survival rates.

Further product details are provided in the report.....

Acute Liver Failure: Therapeutic Assessment

This segment of the report provides insights about the different Acute Liver Failure drugs segregated based on following parameters that define the scope of the report, such as:

Major Players in Acute Liver Failure

There are approx. 5+ key companies which are developing the therapies for Acute Liver Failure. The companies which have their Acute Liver Failure drug candidates in the most advanced stage, i.e. phase II include Promthera Biosciences.

Phases

DelveInsight's report covers around 5+ products under different phases of clinical development like

- Late stage products (Phase III)

- Mid-stage products (Phase II)

- Early-stage product (Phase I) along with the details of

- Pre-clinical and Discovery stage candidates

- Discontinued & Inactive candidates

Route of Administration

Acute Liver Failure pipeline report provides the therapeutic assessment of the pipeline drugs by the Route of Administration. Products have been categorized under various ROAs such as

- Oral

Subcutaneous

Intravenous

Intramuscular

Molecule Type

Products have been categorized under various Molecule types such as

Bispecific Antibody

Peptides

Small molecule

Gene therapy

Product Type

Drugs have been categorized under various product types like Mono, Combination and Mono/Combination.

Acute Liver Failure: Pipeline Development Activities

The report provides insights into different therapeutic candidates in phase II, I, preclinical and discovery stage. It also analyses Acute Liver Failure therapeutic drugs key players involved in developing key drugs.

Pipeline Development Activities

The report covers the detailed information of collaborations, acquisition and merger, licensing along with a thorough therapeutic assessment of emerging Acute Liver Failure drugs.

Key Questions

Current Treatment Scenario and Emerging Therapies:

How many companies are developing Acute Liver Failure drugs?

How many Acute Liver Failure drugs are developed by each company?

How many emerging drugs are in mid-stage, and late-stage of development for the treatment of Acute Liver Failure?

What are the key collaborations (Industry–Industry, Industry–Academia), Mergers and acquisitions, licensing activities related to the Acute Liver Failure therapeutics?

What are the recent trends, drug types and novel technologies developed to overcome the limitation of existing therapies?

What are the clinical studies going on for Acute Liver Failure and their status?

What are the key designations that have been granted to the emerging drugs?
