Abstracts

This report can be delivered to the clients within 48 Hours

DelveInsight's, "Anorexia - Pipeline Insight, 2021," report provides comprehensive insights about 5+ companies and 5+ pipeline drugs in Anorexia pipeline landscape. It covers the pipeline drug profiles, including clinical and nonclinical stage products. It also covers the therapeutics assessment by product type, stage, route of administration, and molecule type. It further highlights the inactive pipeline products in this space.

Geography Covered

Global coverage

Anorexia Understanding

Anorexia: Overview

Anorexia nervosa, also called anorexia, is a potentially life-threatening eating disorder that is characterized by self-starvation and excessive weight loss. The disorder is diagnosed when a person weighs at least 15% less than their normal/ideal body weight. Extreme weight loss in people with anorexia nervosa can lead to dangerous health problems and even death. The exact cause of anorexia is not known, but research suggests that a combination of certain personality traits, emotions, and thinking patterns, as well as biological and environmental factors might be responsible.

Identifying anorexia can be challenging. Secrecy, shame, and denial are characteristics of the disorder. As a result, the illness can go undetected for long periods of time. Although there are no lab tests to specifically diagnose anorexia, the doctor might use

various diagnostic tests, such as blood tests, to rule out physical illness as the cause of the weight loss, as well as to evaluate the effects of the weight loss on the body's organs.

Goals of treatment include restoring the person to a healthy weight, treating emotional issues such as low self-esteem, correcting distorted thinking patterns, and developing long-term behavioral changes. Treatment most often involves a combination of the following treatment methods: **Psychotherapy:** This is a type of individual counseling that focuses on changing the thinking (cognitive therapy) and behavior (behavioral therapy) of a person with an eating disorder. Certain antidepressant medications such as selective serotonin reuptake inhibitors (SSRIs) might be used to help control anxiety and depression associated with an eating disorder. Some antidepressants may also help with sleep and stimulate appetite.

Report Highlights

The companies and academics are working to assess challenges and seek opportunities that could influence Anorexia R&D. The therapies under development are focused on novel approaches for Anorexia.

Anorexia Emerging Drugs Chapters

This segment of the Anorexia report encloses its detailed analysis of various drugs in different stages of clinical development, including phase III, II, I, preclinical and Discovery. It also helps to understand clinical trial details, expressive pharmacological action, agreements and collaborations, and the latest news and press releases.

Anorexia Emerging Drugs

ART2713: Artelo Biosciences

ART2713 is a clinic-ready, potent, peripherally restricted dual synthetic agonist. Existing clinical data with ART2713 suggests meaningful potential for the treatment of cancer-related anorexia and weight loss.

It is currently in Phase I/II stage of development for Anorexia and is being developed by Artelo Biosciences.

PF-07258669: Pfizer

PF-07258669 acts as antagonists of Melanocortin type 4 receptor. It is currently in Phase I stage of development for Anorexia and is being developed by Pfizer.

Further product details are provided in the report..

Anorexia: Therapeutic Assessment

This segment of the report provides insights about the different Anorexia drugs segregated based on following parameters that define the scope of the report, such as:

Major Players working on Anorexia

There are approx. 5+ key companies which are developing the Anorexia. The companies which have their Anorexia drug candidates in the most advanced stage, i.e. Phase I/II include, Artelo Biosciences.

Phases

DelveInsight's report covers around 5+ products under different phases of clinical development like

Late-stage products (Phase III)

Mid-stage products (Phase II)

Early-stage products (Phase I/II and Phase I) along with the details of

Pre-clinical and Discovery stage candidates

Discontinued & Inactive candidates

Route of Administration

Anorexia pipeline report provides the therapeutic assessment of the pipeline drugs by the Route of Administration. Products have been categorized under various ROAs such as

Infusion

Intradermal

Intramuscular

Intranasal

Intravaginal

Oral

Parenteral

Subcutaneous

Topical

Molecule Type

Products have been categorized under various Molecule types such as

Vaccines

Monoclonal Antibody

Peptides

Polymer

Small molecule

Product Type

Drugs have been categorized under various product types like Mono, Combination and Mono/Combination.

Anorexia: Pipeline Development Activities

The report provides insights into different therapeutic candidates in phase III, II, I, preclinical and discovery stage. It also analyses Anorexia therapeutic drugs key players involved in developing key drugs.

Pipeline Development Activities

The report covers the detailed information of collaborations, acquisition and merger, licensing along with a thorough therapeutic assessment of emerging Anorexia drugs.

Key Questions

Current Scenario and Emerging Therapies:

How many companies are developing Anorexia drugs?

How many Anorexia drugs are developed by each company?

How many emerging drugs are in mid-stage, and late-stage of development for Anorexia?

What are the key collaborations (Industry–Industry, Industry–Academia), Mergers and acquisitions, licensing activities related to the Anorexia therapeutics?

What are the recent trends, drug types and novel technologies developed to overcome the limitation of existing therapies?

What are the clinical studies going on for Anorexia and their status?

What are the key designations that have been granted to the emerging drugs?

Key Players

Artelo Biosciences

Serina Therapeutics

Pfizer
