Abstracts

This report can be delivered to the clients within 24 Hours

DelveInsight's, "Autoimmune Hepatitis – Pipeline Insight, 2021," report provides comprehensive insights about 40+ companies and 40+ pipeline drugs in Autoimmune Hepatitis pipeline landscape. It covers the pipeline drug profiles, including clinical and nonclinical stage products. It also covers the therapeutics assessment by product type, stage, route of administration, and molecule type. It further highlights the inactive pipeline products in this space.

Geography Covered

Global coverage

Autoimmune Hepatitis Understanding

Autoimmune Hepatitis: Overview

Autoimmune hepatitis (AIH) is a non-contagious, chronic, inflammatory, autoimmune disease in which one's own immune system attacks healthy, normal liver cells. The cause of liver cell destruction in this disease is unclear, but may be related to an imbalance in some of the immune system cells (effector and regulatory). The persistent inflammation within the liver observed in AIH can result in scarring, ultimately leading to cirrhosis, liver failure requiring a liver transplant, and even death. Symptoms can vary from person to person with AIH; some may not even have any symptoms. Common initial symptoms can include fatigue, nausea, vomiting, abdominal pain, weight loss, light colored stools, dark colored urine, joint pain, rashes, and loss of menstruation in women. Some may develop an enlarged liver (hepatomegaly) and/or spleen

(splenomegaly). Diagnosis of AIH can be complex, and is frequently completed after going through several steps. This includes meeting with your doctor to discuss your past medical problems, your current symptoms, a complete physical exam, blood work, and a liver biopsy. Corticosteroids such as prednisone, prednisolone, or budesonide are usually used to help suppress the immune system (so the liver is not attacked) and calm down the inflammation in the liver. Prednisone is a common first treatment. It has been used for many years and tends to work for many.

'Autoimmune Hepatitis - Pipeline Insight, 2021' report by DelveInsight outlays comprehensive insights of present scenario and growth prospects across the indication. A detailed picture of the Autoimmune Hepatitis pipeline landscape is provided which includes the disease overview and Autoimmune Hepatitis treatment guidelines. The assessment part of the report embraces, in depth Autoimmune Hepatitis commercial assessment and clinical assessment of the pipeline products under development. In the report, detailed description of the drug is given which includes mechanism of action of the drug, clinical studies, NDA approvals (if any), and product development activities comprising the technology, Autoimmune Hepatitis collaborations, licensing, mergers and acquisition, funding, designations and other product related details.

Report Highlights

The companies and academics are working to assess challenges and seek opportunities that could influence Autoimmune Hepatitis R&D. The therapies under development are focused on novel approaches to treat/improve Autoimmune Hepatitis.

Autoimmune Hepatitis Emerging Drugs Chapters

This segment of the Autoimmune Hepatitis report encloses its detailed analysis of various drugs in different stages of clinical development, including phase II, I, preclinical and Discovery. It also helps to understand clinical trial details, expressive pharmacological action, agreements and collaborations, and the latest news and press releases.

Autoimmune Hepatitis Emerging Drugs

VAY736: Novartis

Ianalumab (VAY736) is an anti-B-cell activating factor (BAFF) receptor fully human IgG1 monoclonal antibody, engineered for direct ADCC-mediated B-cell depletion. VAY736 (IANALUMAB) is being developed by MorphoSys in collaboration with Novartis. The drug is being evaluated in Phase II/III clinical trial to treat patients with Autoimmune Hepatitis.

JKB-122: TaiwanJ Pharmaceuticals

JKB-122 is a small molecule and a long-acting TLR4 antagonist showing anti-fibrotic, immuno-modulating, and anti-inflammatory effects for the treatments of chronic liver diseases including Non-Alcoholic Fatty Liver Disease (NAFLD), Autoimmune Hepatitis (AIH), and Non-Alcoholic Steatohepatitis (NASH). The company reported positive results of phase II clinical trial of JKB-122 for the treatment of refractory Autoimmune Hepatitis (AIH) where patients demonstrated improvement on targeted objectives and relevant biomarkers from the JKB-122 treated subjects after the completion of 24-week study.

Further product details are provided in the report.....

Autoimmune Hepatitis: Therapeutic Assessment

This segment of the report provides insights about the different Autoimmune Hepatitis drugs segregated based on following parameters that define the scope of the report, such as:

Major Players in Autoimmune Hepatitis

There are approx. 8+ key companies which are developing the therapies for Autoimmune Hepatitis. The companies which have their Autoimmune Hepatitis drug candidates in the most advanced stage, i.e. Phase II/III include, Novartis.

Phases

DelveInsight's report covers around 8+ products under different phases of clinical development like

Late stage products (Phase III)

Mid-stage products (Phase II)

Early-stage product (Phase I) along with the details of

Pre-clinical and Discovery stage candidates

Discontinued & Inactive candidates

Route of Administration

Autoimmune Hepatitis pipeline report provides the therapeutic assessment of the pipeline drugs by the Route of Administration. Products have been categorized under various ROAs such as

Oral

Parenteral

Intravenous

Subcutaneous

Topical

Molecule Type

Products have been categorized under various Molecule types such as

Monoclonal Antibody

Peptides

Polymer

Small molecule

Gene therapy

Product Type

Drugs have been categorized under various product types like Mono, Combination and Mono/Combination.

Autoimmune Hepatitis: Pipeline Development Activities

The report provides insights into different therapeutic candidates in phase II, I, preclinical and discovery stage. It also analyses Autoimmune Hepatitis therapeutic drugs key players involved in developing key drugs.

Pipeline Development Activities

The report covers the detailed information of collaborations, acquisition and merger, licensing along with a thorough therapeutic assessment of emerging Autoimmune Hepatitis drugs.

Key Questions

Current Treatment Scenario and Emerging Therapies:

How many companies are developing Autoimmune Hepatitis drugs?

How many Autoimmune Hepatitis drugs are developed by each company?

How many emerging drugs are in mid-stage, and late-stage of development for the treatment of Autoimmune Hepatitis?

What are the key collaborations (Industry–Industry, Industry–Academia), Mergers and acquisitions, licensing activities related to the Autoimmune Hepatitis therapeutics?

What are the recent trends, drug types and novel technologies developed to overcome the limitation of existing therapies?

What are the clinical studies going on for Autoimmune Hepatitis and their status?

What are the key designations that have been granted to the emerging drugs?
