## Abstracts

This report can be delivered to the clients within 48 Hours

DelveInsight's, "Bacteremia – Pipeline Insight, 2021," report provides comprehensive insights about 10+ companies and 10+ pipeline drugs in Bacteremia pipeline landscape. It covers the pipeline drug profiles, including clinical and nonclinical stage products. It also covers the therapeutics assessment by product type, stage, route of administration, and molecule type. It further highlights the inactive pipeline products in this space.

### Geography Covered

Global coverage

### Bacteremia Understanding

#### Bacteremia: Overview

Bacteremia refers to the presence of live bacteria in the blood. Bacteremia may result from ordinary activities (such as vigorous toothbrushing), dental or medical procedures, or from infections (such as pneumonia or a urinary tract infection). Usually, bacteremia that results from ordinary events, such as dental procedures, is temporary and causes no symptoms. Bacteremia that results from other conditions may cause fever.

Bacteremia may occur during: Certain ordinary activities, Dental or medical procedures, certain bacterial infections, and Injection of recreational drugs. Identifying or presuming the source of infection will dictate the diagnostic measures taken. People who are at high risk of complications due to bacteremia (such as those who have an artificial heart valve or joint or certain heart valve abnormalities) are often given antibiotics.

Bacteremia requires urgent and appropriate antibiotics. Delay in the administration of

appropriate antibiotics is associated with increased morbidity and mortality.

'Bacteremia - Pipeline Insight, 2021' report by DelveInsight outlays comprehensive insights of present scenario and growth prospects across the indication. A detailed picture of the Bacteremia pipeline landscape is provided which includes the disease overview and Bacteremia treatment guidelines. The assessment part of the report embraces, in depth Bacteremia commercial assessment and clinical assessment of the pipeline products under development. In the report, detailed description of the drug is given which includes mechanism of action of the drug, clinical studies, NDA approvals (if any), and product development activities comprising the technology, Bacteremia collaborations, licensing, mergers and acquisition, funding, designations and other product related details.

### Report Highlights

The companies and academics are working to assess challenges and seek opportunities that could influence Bacteremia R&D. The therapies under development are focused on novel approaches to treat/improve Bacteremia.

### Bacteremia Emerging Drugs Chapters

This segment of the Bacteremia report encloses its detailed analysis of various drugs in different stages of clinical development, including phase II, I, preclinical and Discovery. It also helps to understand clinical trial details, expressive pharmacological action, agreements and collaborations, and the latest news and press releases.

### Bacteremia Emerging Drugs

#### Exebacase: ContraFect

Exebacase (CF-301) is a lysin with potent activity against *Staphylococcus aureus* ('Staph aureus'). Exebacase has the potential to be the first-in-class of a new treatment for patients with *Staph aureus* bacteremia. The Food and Drug Administration (FDA) has granted Breakthrough Therapy designation to exebacase (ContraFect) for the treatment of methicillin-resistant *Staphylococcus aureus* (MRSA) bacteremia. The drug is currently in Phase III stage of development for the treatment of patients with Bacteremia.

## N-Rephasin SAL200: Intron Biotechnology

N-Rephasin SAL200 (SAL200) has a unique mode of action and strong bactericidal activity independent of bacterial antibiotic susceptibility patterns. In addition, SAL200 is highly specific for staphylococci (i.e. target bacteria) and rarely lyses off non-target bacteria, including commensal bacteria, which may reduce clinical complications. The drug is currently being investigated in Phase II clinical trials.

Further product details are provided in the report

### Bacteremia: Therapeutic Assessment

This segment of the report provides insights about the different Bacteremia drugs segregated based on following parameters that define the scope of the report, such as:

#### Major Players in Bacteremia

There are approx. 10+ key companies which are developing the therapies for Bacteremia. The companies which have their Bacteremia drug candidates in the most advanced stage, i.e. Phase III include, ContraFect.

#### Phases

DelveInsight's report covers around 10+ products under different phases of clinical development like

Late stage products (Phase III)

Mid-stage products (Phase II)

Early-stage product (Phase I) along with the details of

Pre-clinical and Discovery stage candidates

Discontinued & Inactive candidates

## Route of Administration

Bacteremia pipeline report provides the therapeutic assessment of the pipeline drugs by the Route of Administration. Products have been categorized under various ROAs such as

Oral

Parenteral

Intravenous

Subcutaneous

Topical

Molecule Type

Products have been categorized under various Molecule types such as

Monoclonal Antibody

Peptides

Polymer

Small molecule

Gene therapy

Product Type

Drugs have been categorized under various product types like Mono, Combination and Mono/Combination.

**Bacteremia: Pipeline Development Activities**

The report provides insights into different therapeutic candidates in phase II, I, preclinical and discovery stage. It also analyses Bacteremia therapeutic drugs key players involved in developing key drugs.

### Pipeline Development Activities

The report covers the detailed information of collaborations, acquisition and merger, licensing along with a thorough therapeutic assessment of emerging Bacteremia drugs.

### Bacteremia Report Insights

Bacteremia Pipeline Analysis

Therapeutic Assessment

Unmet Needs

Impact of Drugs

### Bacteremia Report Assessment

Pipeline Product Profiles

Therapeutic Assessment

Pipeline Assessment

Inactive drugs assessment

Unmet Needs

### Key Questions

Current Treatment Scenario and Emerging Therapies:

How many companies are developing Bacteremia drugs?

How many Bacteremia drugs are developed by each company?

How many emerging drugs are in mid-stage, and late-stage of development for the treatment of Bacteremia?

What are the key collaborations (Industry–Industry, Industry–Academia), Mergers and acquisitions, licensing activities related to the Bacteremia therapeutics?

What are the recent trends, drug types and novel technologies developed to overcome the limitation of existing therapies?

What are the clinical studies going on for Bacteremia and their status?

What are the key designations that have been granted to the emerging drugs?
